

Origin of Life

1. What is the Law of Biogenesis?

Everything living comes from something living (1)

2. What is currently the accepted theory of the origin of life for evolution?

chemical evolution (2)

3. What is the probability that the chemicals needed for life randomly come together?

Operationally impossible (3)

4. What is the problem with spontaneous life?

It requires vast amounts of information because all life is complex!

5. How does Romans 1:18-32 apply in today's American Society?

Today's culture seems to be ignoring the truth of God even in the face of growing scientific evidence. Even though they know of God, they reject him immediately without thought. Today's scientist have access to more information than ever, yet passionately reject even the thought of God. God is now giving many over to themselves.
